Bluetongue in sheep

Know the signs

Bluetongue serotype 3 (BTV-3) is circulating on the eastern side of England. The Animal and Plant Health Agency (APHA) and Defra have declared bluetongue zones spanning several counties to help control further spread of the disease. You can find out more and check whether you are in a bluetongue zone by visiting gov.uk/bluetongue.

Bluetongue is a notifiable disease and must be reported by law. You are not permitted to move any animal showing these clinical signs and if you see any of these signs you must report it to APHA.

Clinical signs to look out for in sheep

- ulcers or sores in the mouth and nose
- discharge from the eyes or nose and drooling from the mouth
- swelling of the lips, tongue, head and neck
- heat and tenderness at the coronary band (where the skin of the leg meets the horn of the foot)

Other clinical signs include:

- inappetence and weight loss
- red skin as a result of blood collecting beneath the surface
- fever
- lameness and reluctance to move
- breathing problems
- abortion, foetal deformities and stillbirths
- death

In lambs

Lambs can become infected with bluetongue virus before birth if the dam is infected while pregnant. Signs of infection include:

- lambs born small, weak, deformed or blind
- death of lambs within a few days of birth
- stillbirths

Ulcers and lesions in the mouth

Nasal redness

Nasal discharge

Recumbent animal
