

Tomato Brown Rugose Fruit Virus (ToBRFV) update.

Webinar
30th April 2019
14.15 – 15.30

A newly emerging virus, Tomato brown rugose fruit virus (ToBRFV), has been confirmed in mainland Europe which poses a potential and significant risk to UK tomato and pepper crops. As part of AHDB's response to this threat we are hosting a webinar with Adrian Fox (Senior Plant Virologist, Fera), Heiko Ziebell (Senior Scientist, Julius Kühn-Institut for Epidemiology and Pathogen Diagnostics), and Sharon Matthews-Berry (Plant Health Consultant, Defra) to update the industry with the latest information on this virus, alongside recommendations for growers.

Please join us on the day by [registering online](#) or, as this webinar will be recorded, catch-up and view it after the event by visiting the ToBRFV Webinar [event page](#).

Agenda:

Time	Speaker	Session
14.15	Adrian Fox	ToBRFV introduction and background.
14.25	Heiko Ziebell	What's the situation in Germany? Symptoms, detection, and methods for prevention and eradication.
14.50	Sharon Matthews-Berry	ToBRFV risk assessment and proposed statutory action.
15.15	Adrian Fox	Wrap-up and further questions.

For more information and any questions please contact Nathalie (Knowledge Exchange Manager) on nathalie.key@ahdb.org.uk.
