

How to select and use gloves correctly when working in pesticide treated crops

Check for signs in the glasshouse so you know whether gloves need to be worn

Do not use fabric gloves

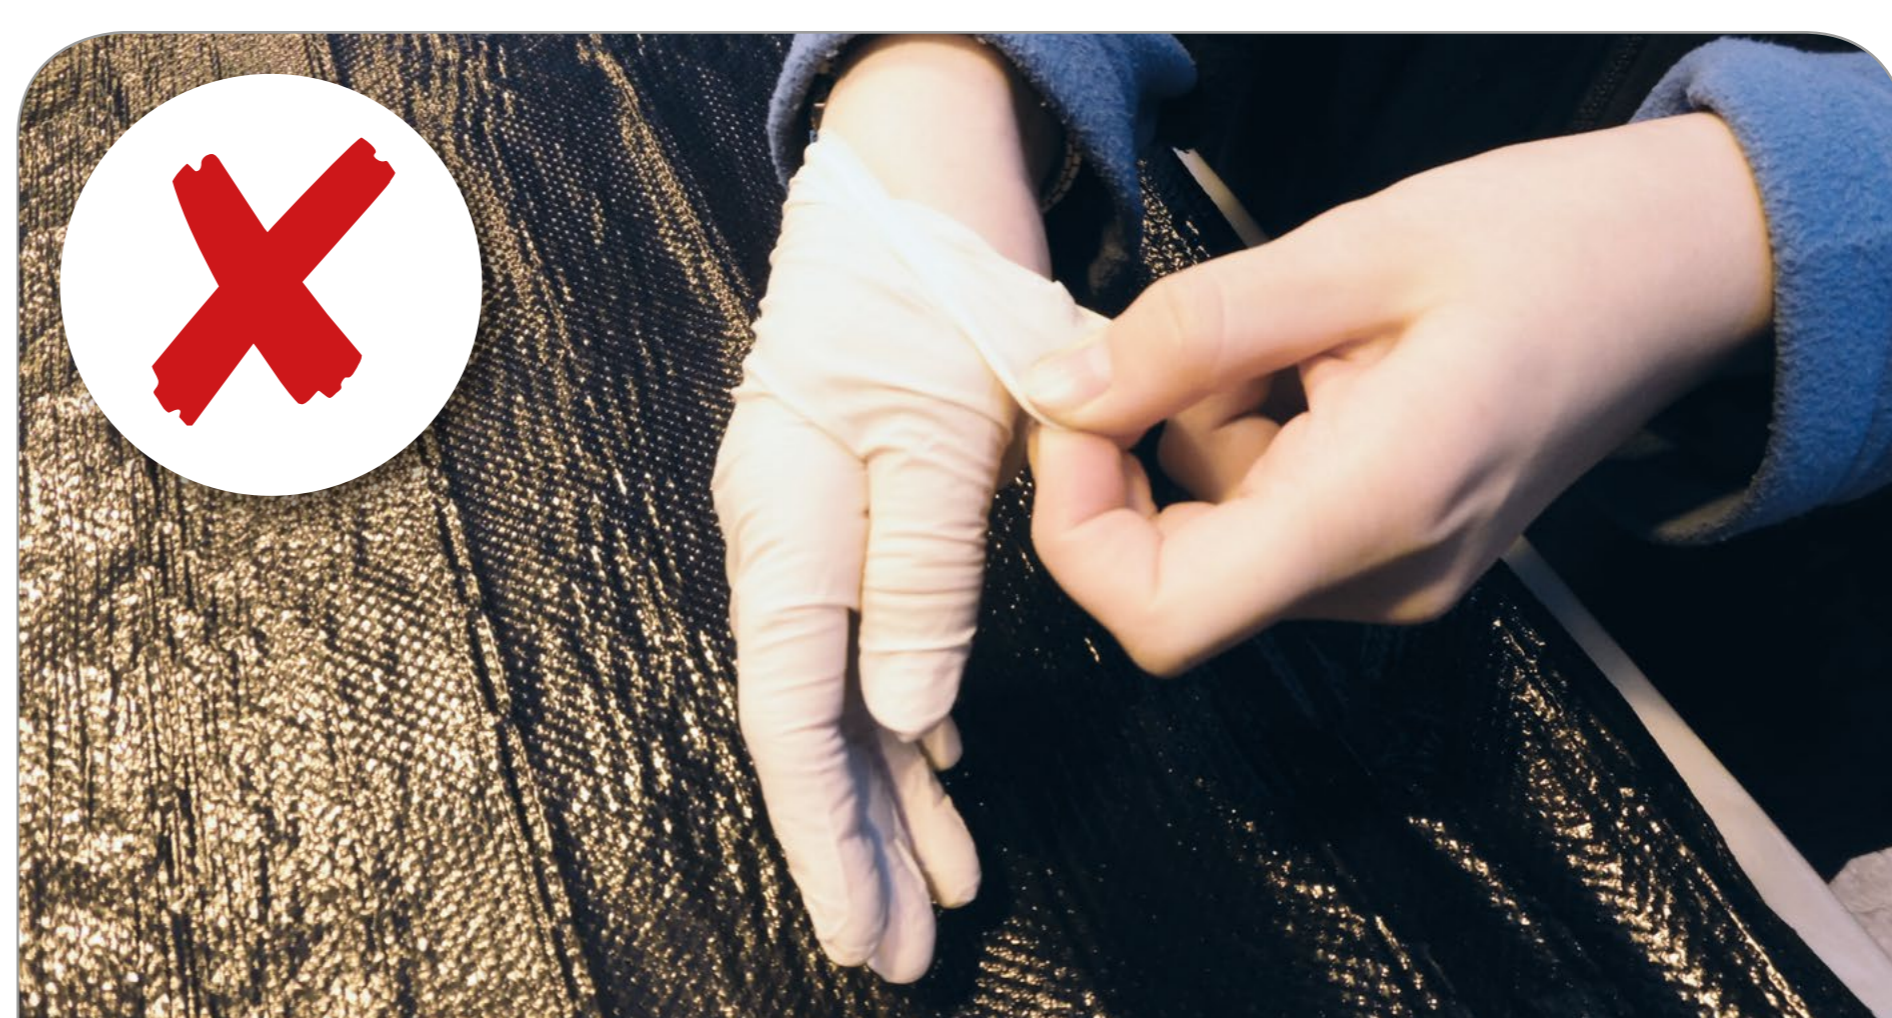

Use the correct gloves to protect the hands from pesticide contamination

Use the gloves correctly – check for damage and replace immediately

Remove gloves correctly

Do not use bare hands when removing gloves

Ask your employer/manager if you have any doubts.

Further information is available in the Factsheet 09/15: Selection and use of 'splash-resistant single use' (SRSU) protective gloves for workers handling treated plants and contaminated surfaces.
