ADVISORY INFORMATION

IMPORTANT: When applying this product under the terms of this Extension of authorisation, comply with any resistance guidance or restrictions stated on the product label.

Total reliance on one pesticide will hasten the development of resistance. Pesticides of different chemical types or alternative control measures should be included in the planned programme. Alternating with different modes of action is a recognised anti-resistance strategy. It is recommended that Delfin WG is used as part of an integrated pest management programme involving other methods of control.

This Extension of authorisation relates to the use of 'Delfin WG' (M18452) as an insecticide for the control of lepidopterans. Applications are to be made via boom or handheld spray in a minimum water volume of 150 L/ha.
