

Supplementary fungicide performance results (2016)

The following slides show results from 2016 AHDB fungicide performance trials on septoria tritici in wheat and rhynchosporium in barley.

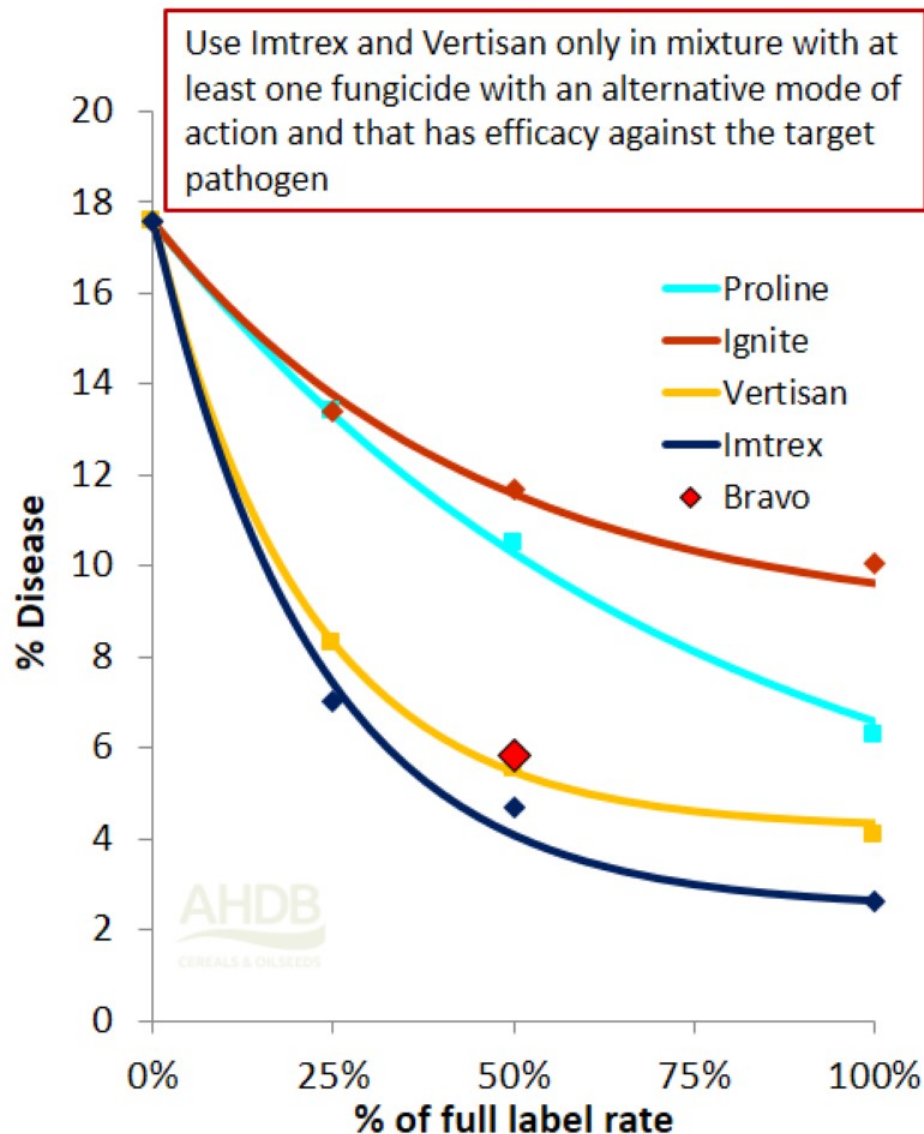

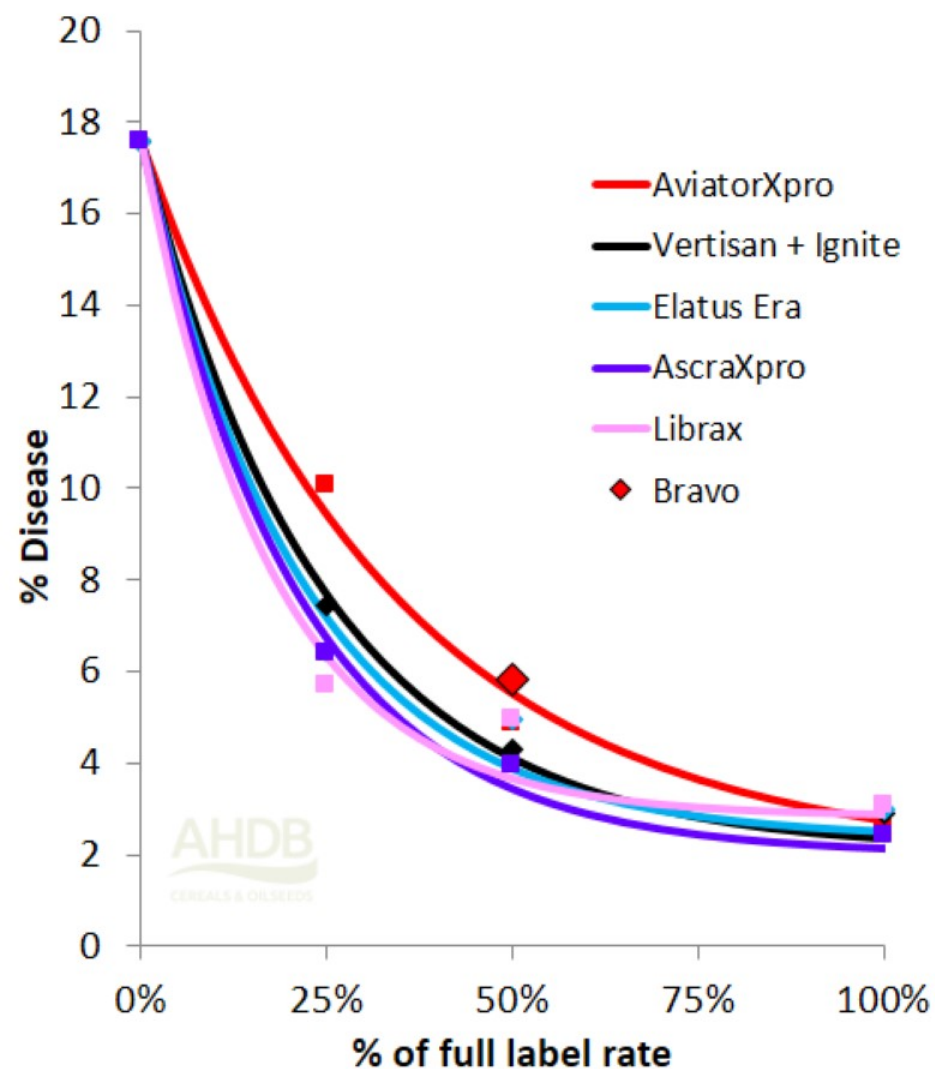

The charts include results for the Syngenta fungicide **ELATUS™ ERA**, which was not registered until after the release of the main dataset in December 2016.

A large, stylized green wavy graphic that spans the bottom half of the slide, resembling rolling hills or a wave. It has a gradient from a lighter green at the top to a darker green at the bottom.

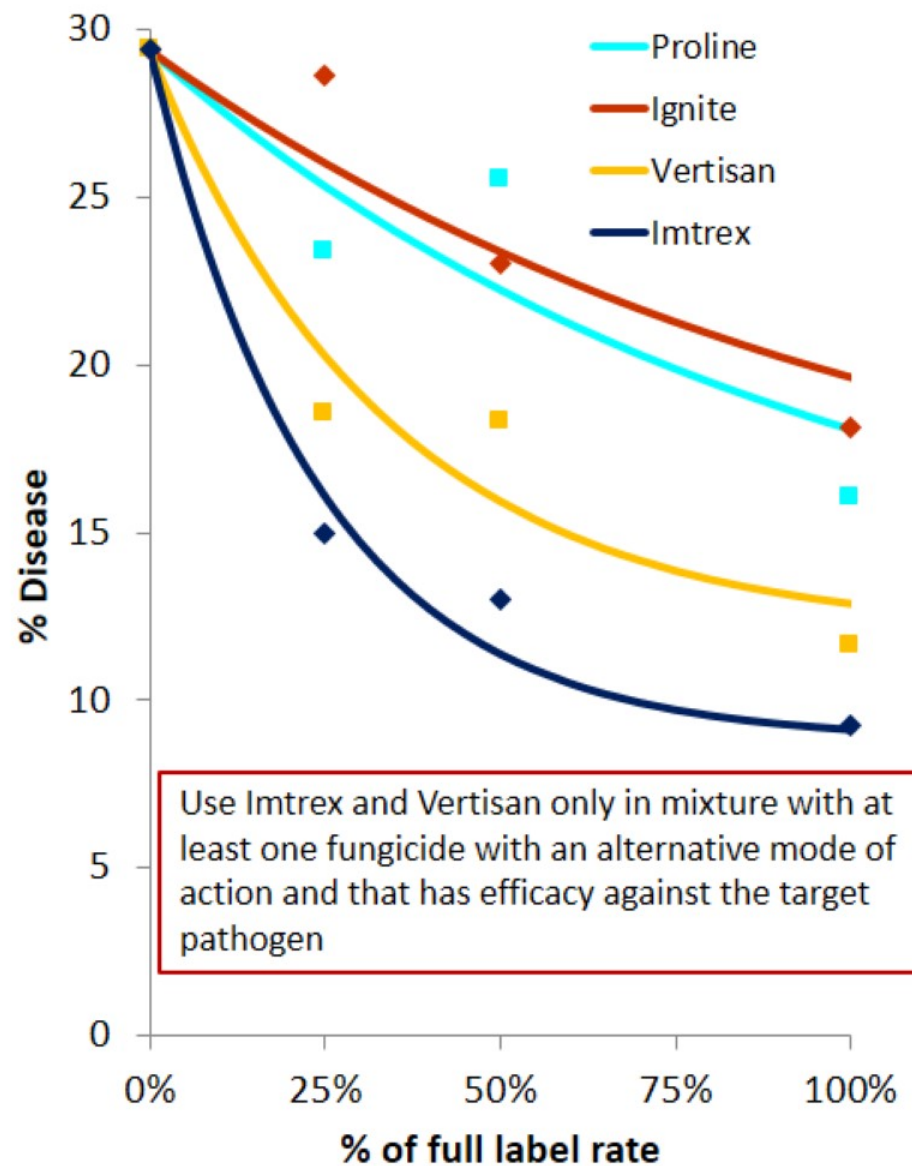

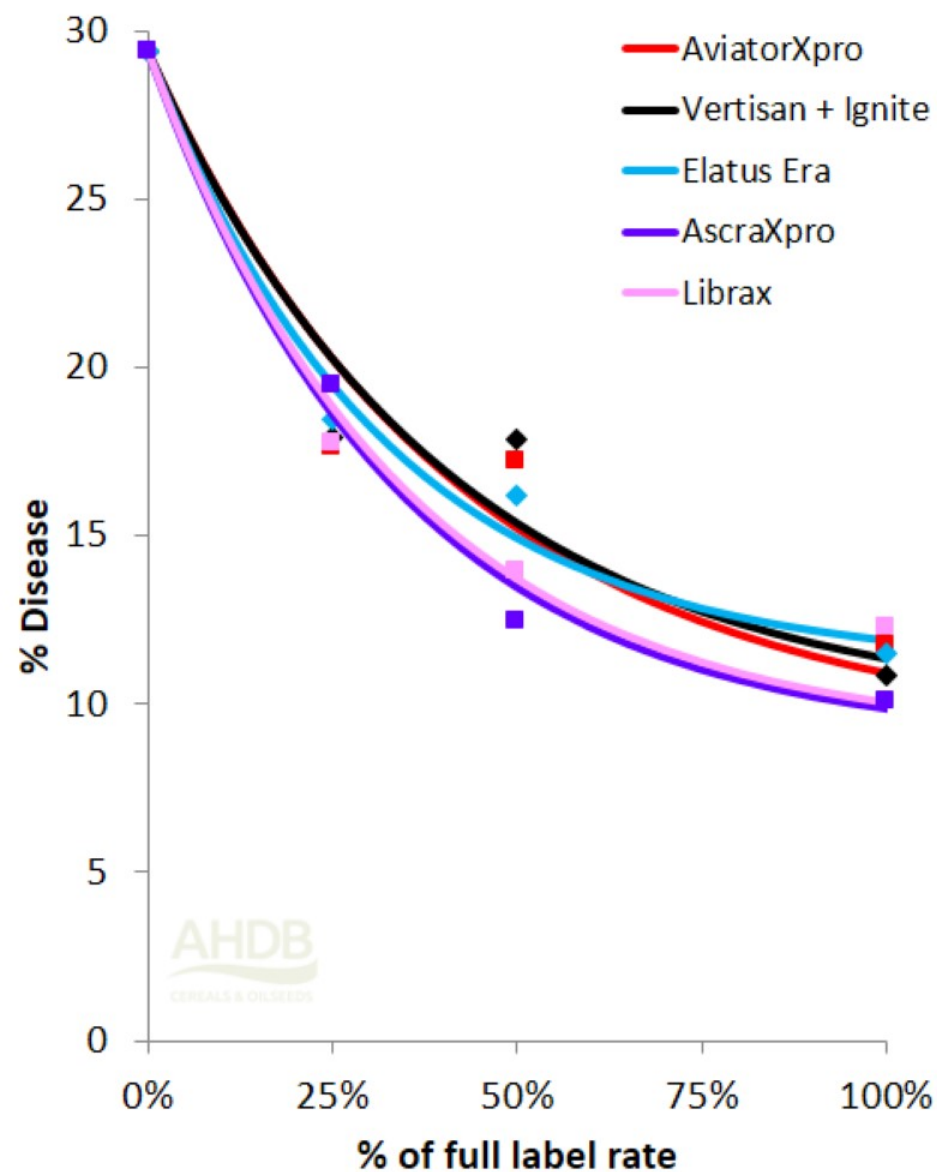

Elatus Era

- New fungicide product for 2017
- Contains new SDHI active plus a triazole:
75 g/l benzovindiflupyr and 150 g/l prothioconazole
- Full label dose 1 l/ha
- Maximum one application
- Approved for wheat, barley, rye and triticale for the control of all major cereal diseases

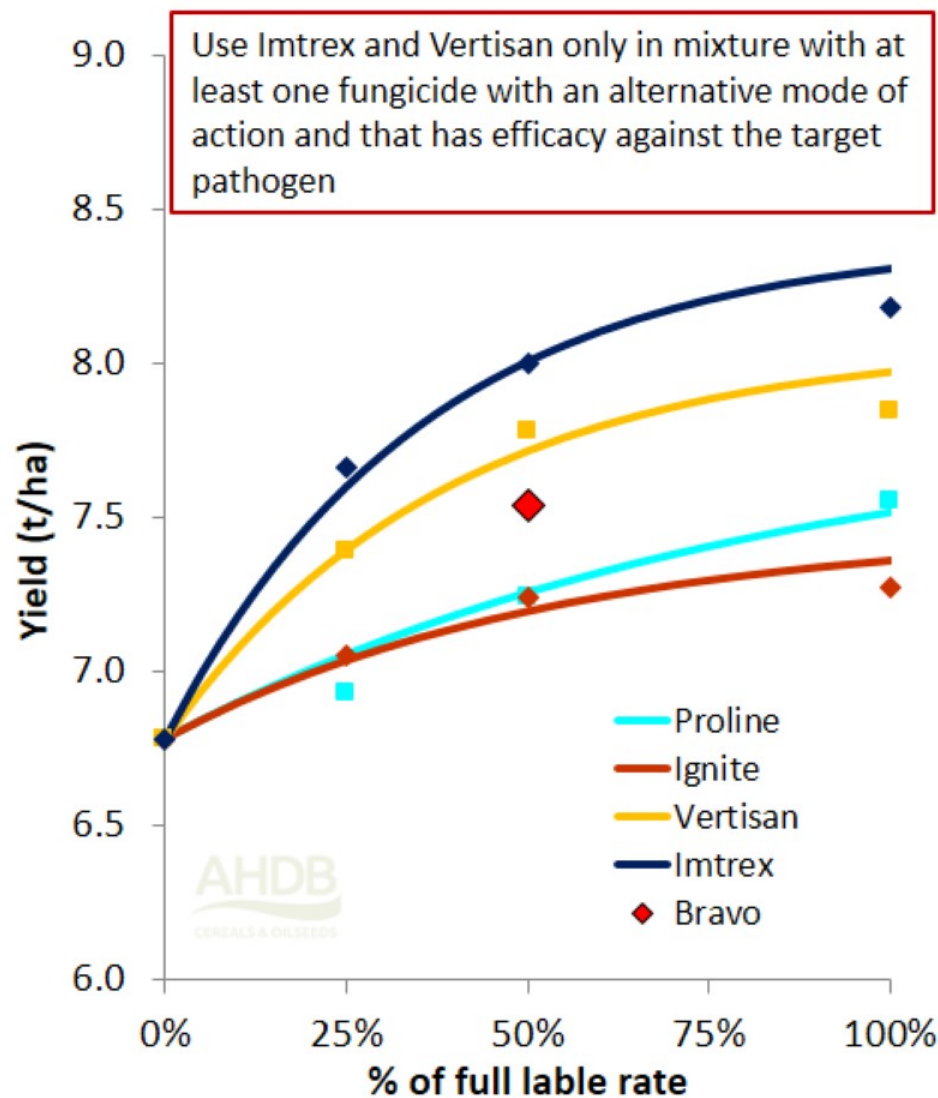

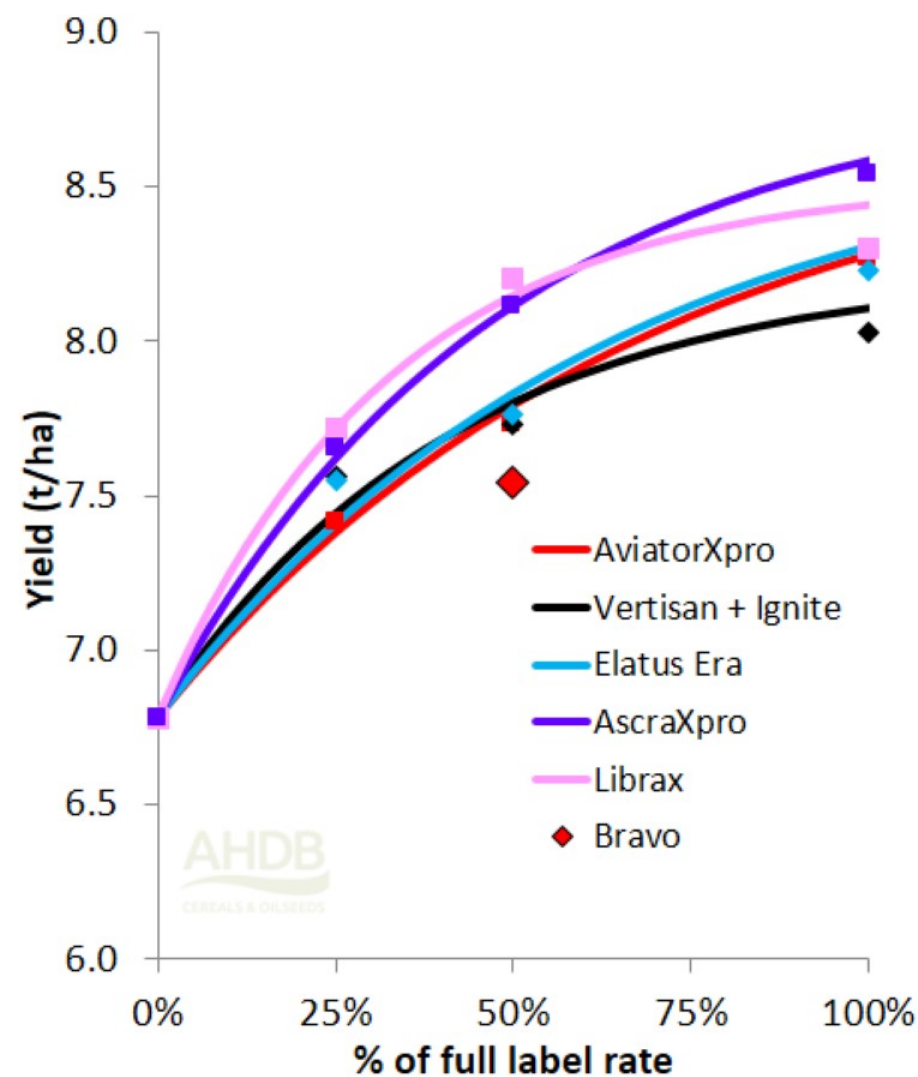

Septoria protectant 2016 (7 trials)

Septoria eradicant 2016 (4 trials)

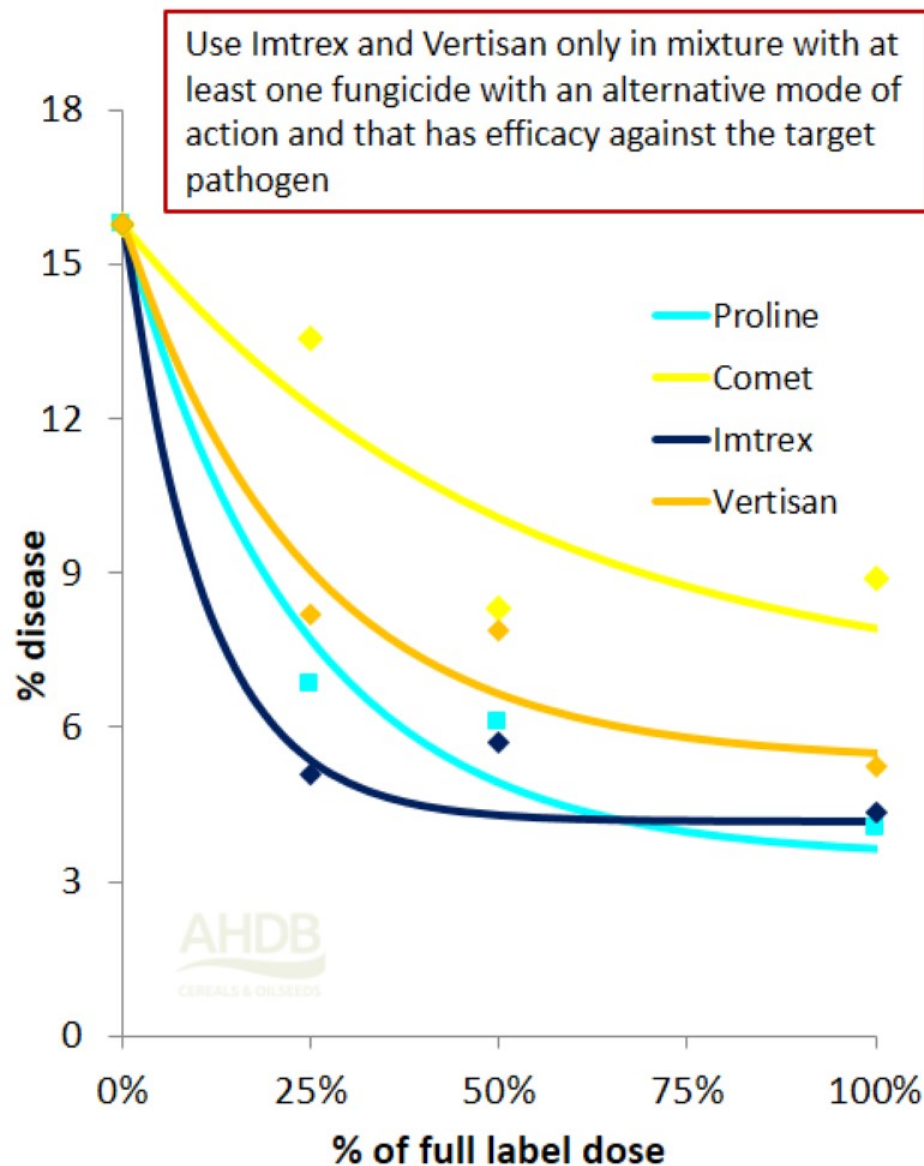

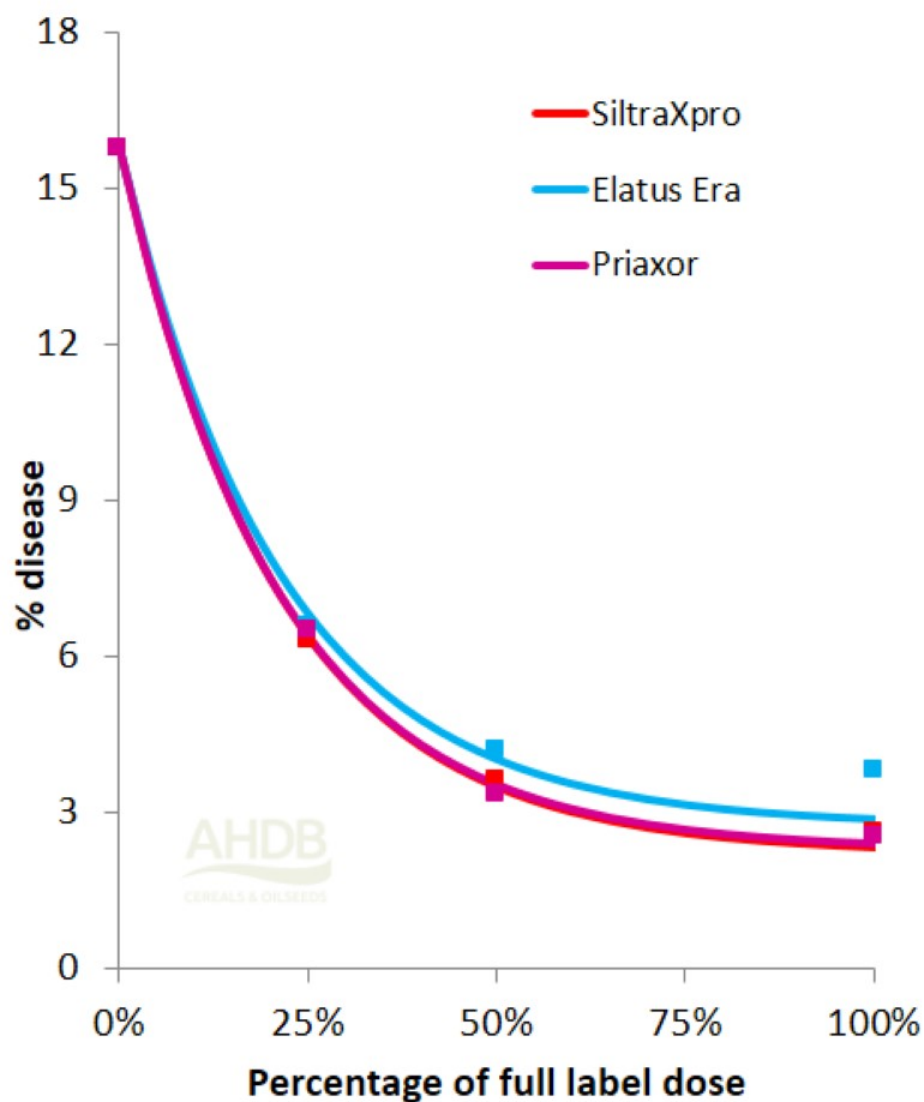

Septoria yield 2016 (7 trials)

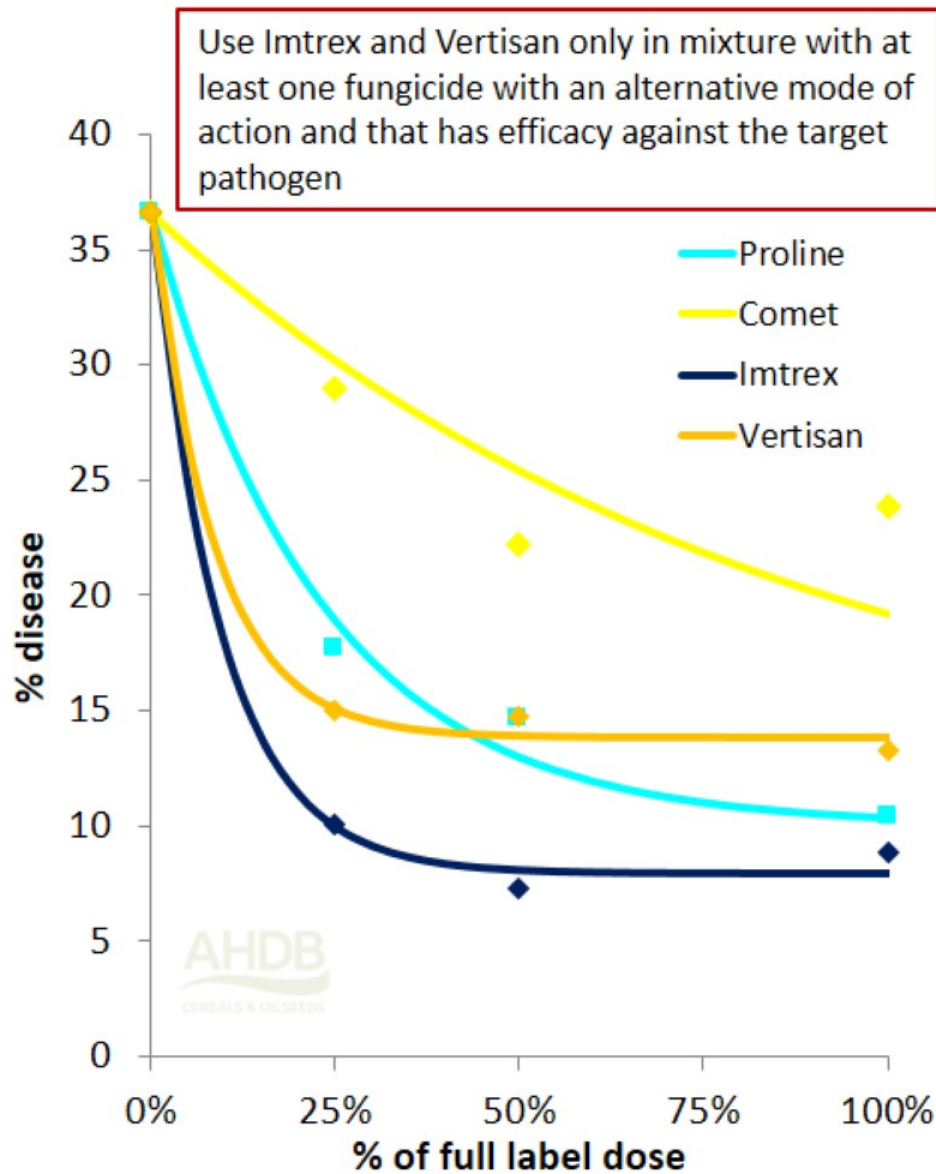

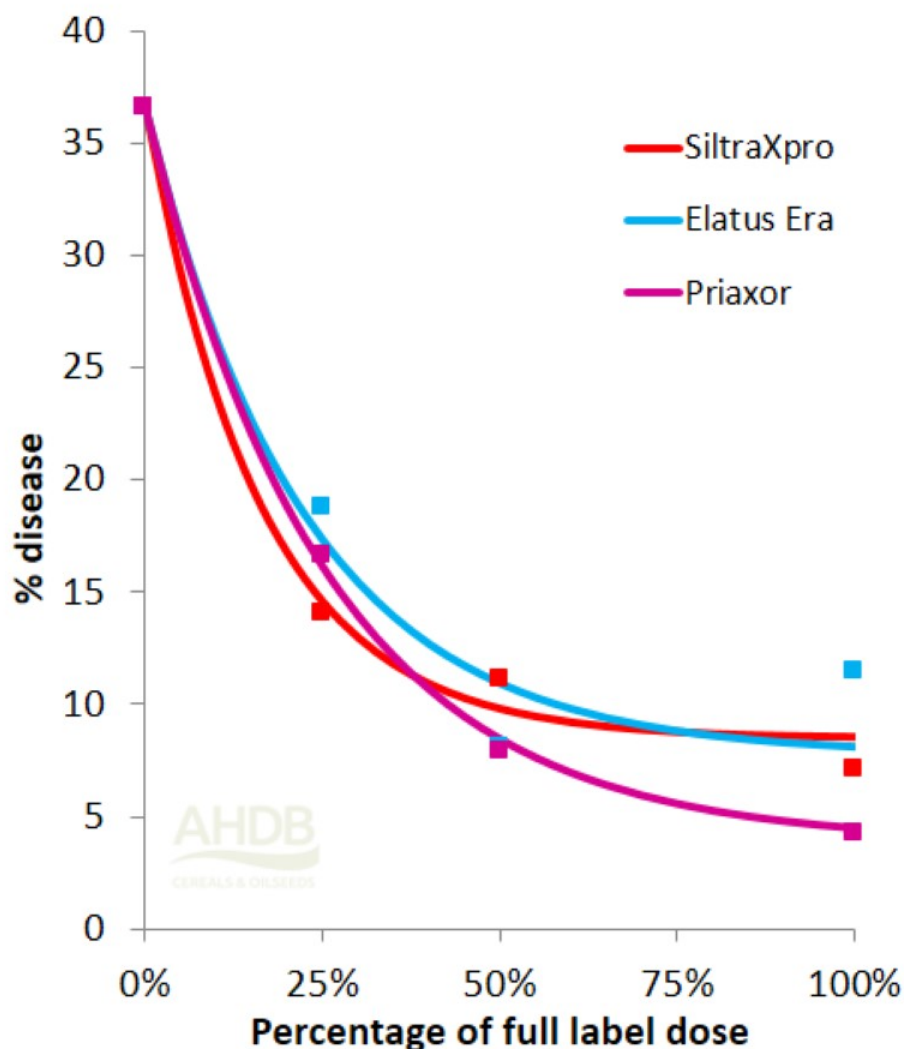

Rhynchosporium protectant 2016

(4 trials)

Rhynchosporium eradicator 2016

(3 trials)

Rhynchosporium yield 2016

(4 trials)
