On the 1-9 scales, high figures indicate that a variety shows the character to a high degree (e.g. high resistance)

The 1-9 ratings are not comparable to those used on the Recommended List table.

Candidate varieties will be considered for the 2016/17 HGCA Recommended List

HOLL = High Oleic Low Linolenic variety

TuYV = Turnip Yellow Virus resistance

All data except disease ratings are taken from fungicide treated trials

To allow direct comparisons the data presented for control varieties are taken only from trials in which the candidate varieties have also been grown

See the HGCA Recommended List for full data on control varieties
