Winter oilseed rape 2021/22 - regional rankings (East/West and North)

Ranked according to gross output for each region. Note: varieties are tested in UK trials but some may only achieve recommendation for one region.

### East/West Region

This table should be read in conjunction with the AHDB Recommended List of winter oilseed rape varieties for 2021/22. Blackpearl is also recommended for the E/W region but data cannot be published as this variety has not completed National List testing.

**Legend:**
- **Sp** = Specific recommendation
- **(Sp)** = Resistance to Turnip yellows virus (TuYV) is no longer a specialist category. Temptation has a specific recommendation for this trait
- **$** = Specific recommendation for growing on land infected with common strains of clubroot. These varieties should only be used in line with AHDB clubroot management guidelines, to reduce the risk of resistance breakdown
- **&** = Herbicide-tolerant variety. DK Imprint CL, Nizza CL and PT279CL have a specific recommendation for tolerance to specific imidazolinone herbicides (a Clearfield® variety)
- **~** = HOLL (High Oleic, Low Linolenic) variety
- **C** = Yield control
- ***** = Variety no longer under test in RL trials in region
- **LSD** = Least significant difference
- **Average LSD (5%)**: Varieties that are more than one LSD apart are significantly different at the 95% confidence level
