LSD = Least significant difference
Average LSD (5%): Varieties that are more than one LSD apart are significantly different at the 95% confidence level

Winter rye rust ratings

The RL 2021/22 now features disease ratings for winter rye (brown rust). As Described, not Recommended, varieties, less information is available to calculate the ratings. As a result, these ratings use a six-year dataset. As for all ratings, statistical significance (LSD) should be taken into account when deciding if varieties have different susceptibility to disease.
