

Winter oilseed rape 2024/25 – regional rankings (East/West and North)

Ranked according to gross output for each region. Note: varieties are tested in UK trials but some may only achieve recommendation for one region

	Scope of recommendation		East/West region	
			Gross output (%C)	Seed yield (%C)
			(5.0 t/ha)	(4.7 t/ha)
LG Armada	NEW	UK	106	106
LG Academic	NEW	UK	106	106
LG Adeline ¹	NEW	UK	106	106
Turing		UK	106	107
Dolphin	NEW	E/W	106	103

Average LSD (5%)			4.7	4.6

Dark blue: UK recommendation (recommended for both East/West and North regions)

Light blue: Regional recommendation (recommended for the East/West or North region)

This table should be read in conjunction with the winter oilseed rape RL 2024/25.

¹ LG Adeline will be added to the GB and NI Variety Lists (VL) in January 2024, provided no representations are received.

UK = Recommended for the UK

E/W = Recommended for the East/West region

N = Recommended for the North region

Sp = Specific recommendation

C = Yield control. For this table, DK Expansion was also a control variety but is no longer listed

* = Variety no longer under test in RL trials

= Specific recommendation for growing on land infected with common strains of clubroot. Believed to be resistant to common strains of clubroot, but this has not been verified in RL tests. These varieties should only be used in line with AHDB clubroot management guidelines, to reduce the risk of resistance breakdown

& = Herbicide-tolerant variety. This variety has a specific recommendation for tolerance to specific imidazolinone herbicides (a Clearfield[®] variety)

LSD = Least significant difference

Average LSD (5%): Varieties that are more than one LSD apart are significantly different at the 95% confidence level
