This table should be read in conjunction with the winter barley RL 2026/27.

KWS Feeris is believed to be tolerant to *Barley yellow dwarf virus* (BYDV) but this has not been verified in RL tests.

On the 1–9 scales, high figures indicate that a variety shows the character to a high degree (e.g. high resistance).

Comparisons of varieties across regions are not valid.

All winter barley varieties on this list are believed to be resistant to *Barley yellow mosaic virus* strain 1 (BaYMV1) and *Barley mild mosaic virus* (BaMMV).

= Hybrid variety

PGR = Plant growth regulator

[] = Limited data

MBC = Malting Barley Committee

F = Full MBC approval

O = No longer approved by MBC

R = Believed to be resistant to the trait; as this is a breeders' claim, this has not been verified in RL tests

LSD = Least significant difference

Average LSD (5%): Varieties that are more than one

LSD apart are significantly different at the 95%

confidence level
