

## AHDB Machinery costing calculator

This booklet is designed to give a quick cost of a tractor, an implement giving a total cost of the combination. Combine harvesters and self-propelled sprayers can also be costed.

Simply fill in these  boxes. As you go, take note of the 'A' & 'b' figures and take them forward to the next calculation as you go. Note figures appearing in  these boxes are yearly totals. Harry Henderson Technical Manager AHDB.

## Tractor costing calculator

Tractor \_\_\_\_\_

Purchase price \_\_\_\_\_ A

Hours per year \_\_\_\_\_ B

Intended years of ownership \_\_\_\_\_ C

Estimated value at sale \_\_\_\_\_ D

Price of fuel (£/Lt) \_\_\_\_\_ E

Avg fuel cost (£/hr)  X  = \_\_\_\_\_ F

Fuel cost per year  X  = \_\_\_\_\_

Depreciation/yr  -  ÷  = \_\_\_\_\_

Repairs (£/yr) \_\_\_\_\_

Maintenance (£/yr) \_\_\_\_\_

Insurance (estimated) \_\_\_\_\_

Total tractor costs per year **add up numbers in box** \_\_\_\_\_ G

Tractor cost per hour  ÷  = \_\_\_\_\_ a

## Implement costing calculation

|                               |   |
|-------------------------------|---|
| Item                          | _____   |
| Equipment purchase price      | _____ A   |
| Hectares worked per year      | _____ B   |
| Intended years of ownership   | _____ C   |
| Estimated value at sale       | _____ D   |
| Work rate (ha/hr)             | _____ f   |
| Depreciation/yr               | $\boxed{A} - \boxed{D} \div \boxed{C} =$ <div style="border: 1px solid #00aaff; padding: 5px; display: inline-block; width: 150px; height: 100px; vertical-align: middle;">                     _____<br/>                     _____<br/>                     _____<br/>                     _____                 </div> |
| Repairs (£/yr)                | _____   |
| Maintenance (£/yr)            | _____   |
| Total equipment cost per year | add up numbers in <span style="border: 1px solid #00aaff; padding: 2px;">box</span> = _____ G   |
| Cost per hectare              | $\boxed{G} \div \boxed{B} =$ _____ i  |

## Operation cost

Tractor cost per hour (from page 1) \_\_\_\_\_ a

Work rate (from page 2) \_\_\_\_\_ f

Tractor cost per hectare  ÷  = \_\_\_\_\_ b

Equipment cost per hectare (from page 2) \_\_\_\_\_ i

Operation cost per hectare  +  = \_\_\_\_\_ c

## Labour cost

Labour cost per hour \_\_\_\_\_ d

Work rate \_\_\_\_\_ f

Labour cost per hectare  ÷  = \_\_\_\_\_ g

Total operation cost  +  = £/ha \_\_\_\_\_

## Combine harvester or self-propelled sprayer costing calculator

Machine \_\_\_\_\_

Purchase price \_\_\_\_\_ A

Hectares covered per year \_\_\_\_\_ B

Intended years of ownership \_\_\_\_\_ C

Estimated value at sale \_\_\_\_\_ D

Fuel cost (£/Lt) \_\_\_\_\_ E

Avg fuel consumption (Lt/ha)= \_\_\_\_\_ X E =£/ha \_\_\_\_\_ F

Fuel cost (£/yr) B X F = \_\_\_\_\_

Depreciation/yr A - D ÷ C = \_\_\_\_\_

Repairs (£/yr) \_\_\_\_\_ \_\_\_\_\_

Maintenance (£/yr) \_\_\_\_\_ \_\_\_\_\_

Insurance (£/yr) (optional) \_\_\_\_\_ \_\_\_\_\_

Total vehicle costs per year add up numbers in box \_\_\_\_\_ G

Operation cost per hectare  ÷  = \_\_\_\_\_

Labour cost per hour \_\_\_\_\_ d

Work rate (average) \_\_\_\_\_ f

Labour cost per hectare  ÷  = \_\_\_\_\_ g

Total operation cost  +  = £/ha \_\_\_\_\_

## Summary

**Tractor cost per hectare**                      £ \_\_\_\_\_

**Implement cost per hectare**                      £ \_\_\_\_\_

**Combine cost per hectare**                      £ \_\_\_\_\_

**Self-propelled sprayer cost**                      £ \_\_\_\_\_

## Calculate the width of implement, or implements, required for your farm

1. How much hectareage do you have to cover in the given time?
2. What time frame or window do you have to complete the task? Use hours, i.e. 20 days = 200 hours.
3. What's the speed of operation? Use KPH and be realistic.
4. What is the Field Efficiency\*? I.e. out of 100% of time spent in field, what percentage of time is spend turning around and re-filling?

$$\frac{\text{Ha/hr} \times 10}{\text{Kph} \times \text{field efficiency}} = \text{required machine width}$$

### Example; Crop sprayer

430ha to spray in 36 operating hours. Avg. speed 12kph & 70% field efficiency

$$\text{Required coverage: } \frac{430\text{ha}}{36\text{hrs}} = \mathbf{12\text{ha/hr}} \text{ spraying time}$$

$$\text{Width needed } \frac{12 \times 10}{12 \times 0.7} = \frac{120}{8.4} = 14 \text{ (18 meter sprayer)}$$

### \*Typical Field Efficiency of arable operations

- Ploughing 65% field efficiency; add 3–5% if average field size is greater than 10 ha
- Min till cultivation 65%; add 3–5% if average field size is greater than 10 ha, reduce by 5% if no GPS guidance
- Drilling 55%; add 3–5% if average field size is greater than 10 ha, reduce by 5% if no GPS guidance
- Spraying 50%; add 3–5% if average field size is greater than 10 ha, reduce by 3% if no GPS guidance, increase if bowser used. NB a farm efficiency can be below 50% if travel time is taken into account, consider a bowser.
- Fertiliser spreading 60%; add 3–5% if average field size greater than 10 ha, reduce by 3% if no GPS guidance
- Combining 80%; add 3–5% if average field size is greater than 10 ha, reduce by 10% if no GPS guidance, reduce if not unloading on the move

## What size of drill do you need?

Expected work rate per 10 hour day

Average speed 10kph @ 70% field efficiency, Grain only  
 @ 60% field efficiency, Grain & fertiliser

| Drill size | Average output per day (ha/d) |                    |
|------------|-------------------------------|--------------------|
|            | Grain only                    | Grain & fertiliser |
| 3 meter    | 21                            | 18                 |
| 4 meter    | 28                            | 24                 |
| 6 meter    | 42                            | 35                 |
| 9 meter    | 63                            | 54                 |

| Operation costs for 2018/19 £/ha       | Monitor Farm Average Cost | Central Association of Agricultural Valuers Cost | National Association of Agricultural Contractors |
|--|---------------------------|--|--|
| Drilling                               | £32                       | £37  | £49  |
| Ploughing                              | £57                       | £62  | £63  |
| Pressing                               | £20                       | £27  | £36  |
| Cultivating. Discs, tines, packer etc. | £29                       | £41  | £65  |
| Subsoiling                             | £41                       | £50  | £59  |
| Rolling                                | £9                        | £15  | £20  |
| Spraying                               | £6                        | £7   | £12  |
| Fertilising (solid)                    | £5                        | £9   | £12  |
| Combining                              | £66                       | £79  | £87  |
| Grain Carting                          | £31                       | £24  | £34  |
