

AHDB DL harvest results - Spring oilseed rape 2024 (Provisional results)

22-Oct		Seed yield (t/ha) - as % mean of controls			
Name	Code	20-24 mean	2024 mean	Breedon Derbs	Balgonie Fife
Control mean		2.81	2.39	2.45	2.34
LSD 5% (as %C)		5.3	8.4	12.3	7.7
CV%		4.2	3.5	8.4	5.3
Sowing date				02-May	25-Apr
Previous crop				W-wheat	S-barley
Soil type				D-clay	L-sand
Tillage				Shallow	Plough
Lumen (C)	SR2763	97	98	100	96
Lakritz (C)	SR3169	103	102	100	105
Builder	SR2541	98	102	101	103
Performer	SR3067	100	103	103	102
Contra CL	SR3168	92	96	95	98
Lavina	SR3271	98	92	96	88
Fergus	SR9159	93	97	94	100

(C) = yield control

Please note - these data are provisional and may be subject to change.

Data were assembled with care but treat differences below LSD cautiously. Performance variation is not AHDB's responsibility.

Not all varieties on the AHDB Recommended List are presented, since the focus is to test new varieties. Yields for well-established varieties on the AHDB Recommended Lists can be accessed via ahdb.org.uk/rl

The AHDB Recommended Lists are managed by a project consortium of AHDB Cereals & Oilseeds, BSPB, UKFM and MAGB. AHDB Cereals & Oilseeds is a division of the Agriculture and Horticulture Development Board.

Harvest results from an individual trial sites should not be used to make conclusions on individual variety performance. Recommended lists are based on information taken from trials across the UK over several seasons. As more information becomes available from the 2024 harvest, this will contribute to the over trials averages, which comprise 4 years for oilseeds and 5 years for cereals. These values provide better information for comparison between varieties. When more results are available, our validation procedures will examine cross site differences further.
